Lucky Singh Rawat

Dehradun, India

+91-8755844663, Email-Me, LinkedIn, GitHub, LeetCode

Education

- Graphic Era Hill University — 2023 - Present
  B. Tech in Computer Science & Engineering — CGPA: 7.7/ 10

Technical Skills

- **Programming Languages:** C, C++, Java, JavaScript, Python
- **Data Structure & Algorithms:** Arrays, Strings, Linked Lists, Stacks, Queues, Trees, Graphs, Recursion, Dynamic Programming, Backtracking
- **Frameworks & Backend:** Flask, Node.js, REST APIs
- **Web Technologies:** HTML, CSS, React.js
- **Databases:** MySQL, SQLite
- **Developer Tools**: Qt Creator, Visual Studio Code, Git, GitHub, SQLite Browser
- **Cybersecurity & Analysis Tools:** Burp Suite, Wireshark, Nmap, Metasploit.

Projects

Hyper-Nest – GitHub repo
[C++, Qt creator] (Sep 2025 – Nov 2025)

- Engineered a secure sandbox, isolating 75+ malware samples, including viruses, trojans, and ransomware, facilitating safety, automated behavioral analysis, and reduced manual analysis time by approximately 20%.
- Architected heuristic scanning modules to detect 15% more abnormal binaries, decreasing incident response time, while contributing to vulnerability mitigation efforts within the sandbox environment.
- Constructed behavioral monitoring modules capturing 10+ runtime activity indicators (file operations, system calls, and process behavior) to enhance automated malware behavior analysis.

Secure File Storage System
[Python, HTML, CSS, Cryptography, RBAC] (Feb 2025 – May 2025)

- Engineered a role-based secure file storage platform implementing RBAC to manage permissions across 3+ user roles, strengthening access control and reducing unauthorized access risks.
- Integrated AES-based encryption mechanisms securing 100% of file uploads, storage, and transmission to prevent unauthorized data exposure.
- Built 6+ RESTful APIs enabling secure file upload, retrieval, and access verification with authentication checks for controlled data access.

Password Manager - GitHub repo
[Python, Cryptography, Tkinter] (Dec 2023 – Jan 2024)

- Developed a Python-based desktop password manager with Tkinter GUI enabling encrypted storage and management of 100+ credentials per user.
- Implemented SHA-256 hashing and AES encryption algorithms to secure stored authentication data and prevent plaintext credential exposure.
- Designed an encrypted credential vault system enabling secure storage and retrieval of user passwords with cryptographic protection.

Achievements

- Implemented encryption and RBAC security policies that reduced simulated data-breach risks by 30% during security testing.
- Developed a Python-based password manager using cryptographic encryption, adopted by 15+ peers for secure credential storage and authentication.
- Solved **200+ Data Structures and Algorithms problems** across LeetCode and HackerRank, strengthening algorithmic problem-solving skills.

Certifications

- C Programming and Assembly Language — NPTEL (*Aug 2024 – Oct 2024)*
- Foundation of Cloud, IoT, and Edge Machine Learning — NPTEL (*Feb 2025 – Apr 2025)*
- Ethical Hacker course — CISCO (Set *2025 – Oct 2025)*
- Complete Website Ethical Hacking and Penetration Testing—Udemy (*Oct 2025 – Nov 2025)*
